

QSMEE BRAKE TEST

As at Feb 2023

The test is carried out by running your locomotive and its train at your normal operating speed as you approach the brake test zone.

Apply your brakes as you pass the first of the two marker posts.

If you don't stop before reaching the second marker post your train has failed the brake test.

The braking distances are currently set at 8 metres on the ground level track and 6 metres on the elevated track.
